

CARING FOR YOUR DISAPPEARING FOUNTAIN

7901 N. Kickapoo · Shawnee, OK 74804

(405) 273-8363

www.pondproshop.com

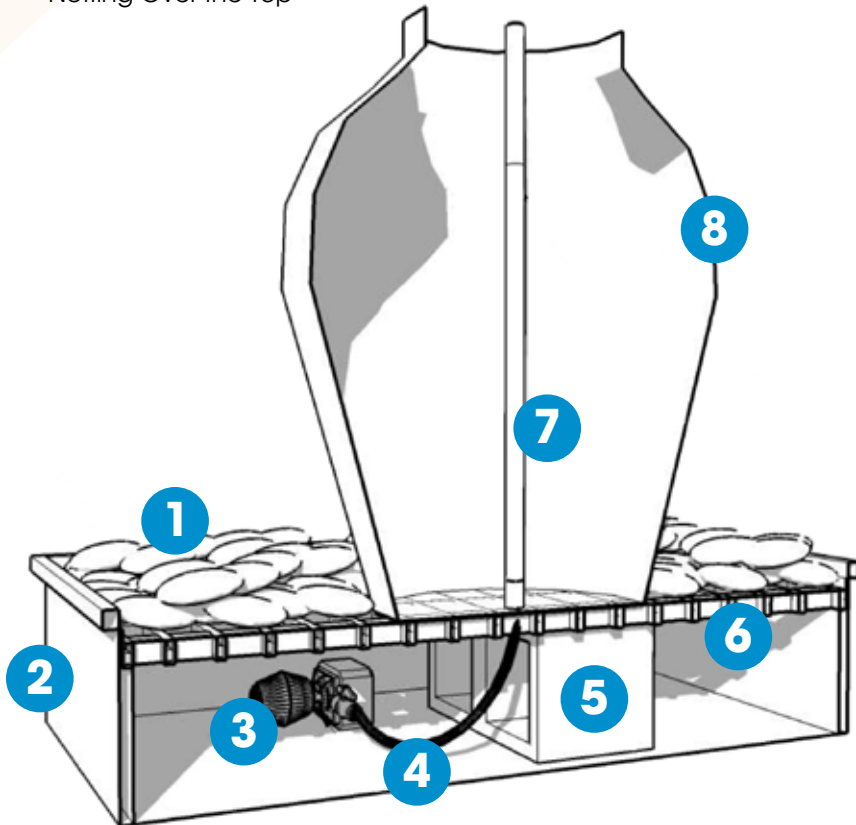

Components

1. Rock Topping
2. Reinforced Plastic Disappearing Fountain Reservoir
3. Submersible Pump
4. Flexible Tubing
5. Center Block to Support Weight of Fountain (more than one may be needed)
6. Reinforced Plastic Grating with Netting Over the Top
7. PVC Pipe Gives You The Plume of Water at the Top, While Keeping the Feature Full of Water.
8. Decorative Pot, Statue, Fountain or Waterfall

We can drill and plumb any pot purchased at Pond Pro Shop for a small fee.

We pre-cut a 'trap door' into the grating so you have easy access to your pump.

Maintenance

Care of Your Disappearing Fountain

The reservoir must be kept filled with water which can be accomplished in a couple of ways:

1. Fill the fountain as needed with a garden hose.
2. Site the fountain near an irrigation head, so the sprinkler keeps the reservoir filled.

We do not recommend using automatic fill devices because they frequently "stick" and don't shut off.

The fountain piece will need to be scrubbed occasionally to remove algae and scale. AlgaeFix (safe for birds and pets) can be used to control algae growth but must be added every week. Use Sparkle and Sublime to minimize hard water stains (especially on dark fountains or fountains close to windows) on a monthly basis. Note: some folks prefer the natural patina of algae on the pieces, in which case no scrubbing, or chemical, is necessary.

During the winter, remove the PVC stand pipe; drain the pot and reservoir. You may want to move your pot indoors if you live in an area subject to intense freezes. If you remove the pump place it in a bucket of water in a place where it won't freeze.

Kits of Various Sizes are Available
